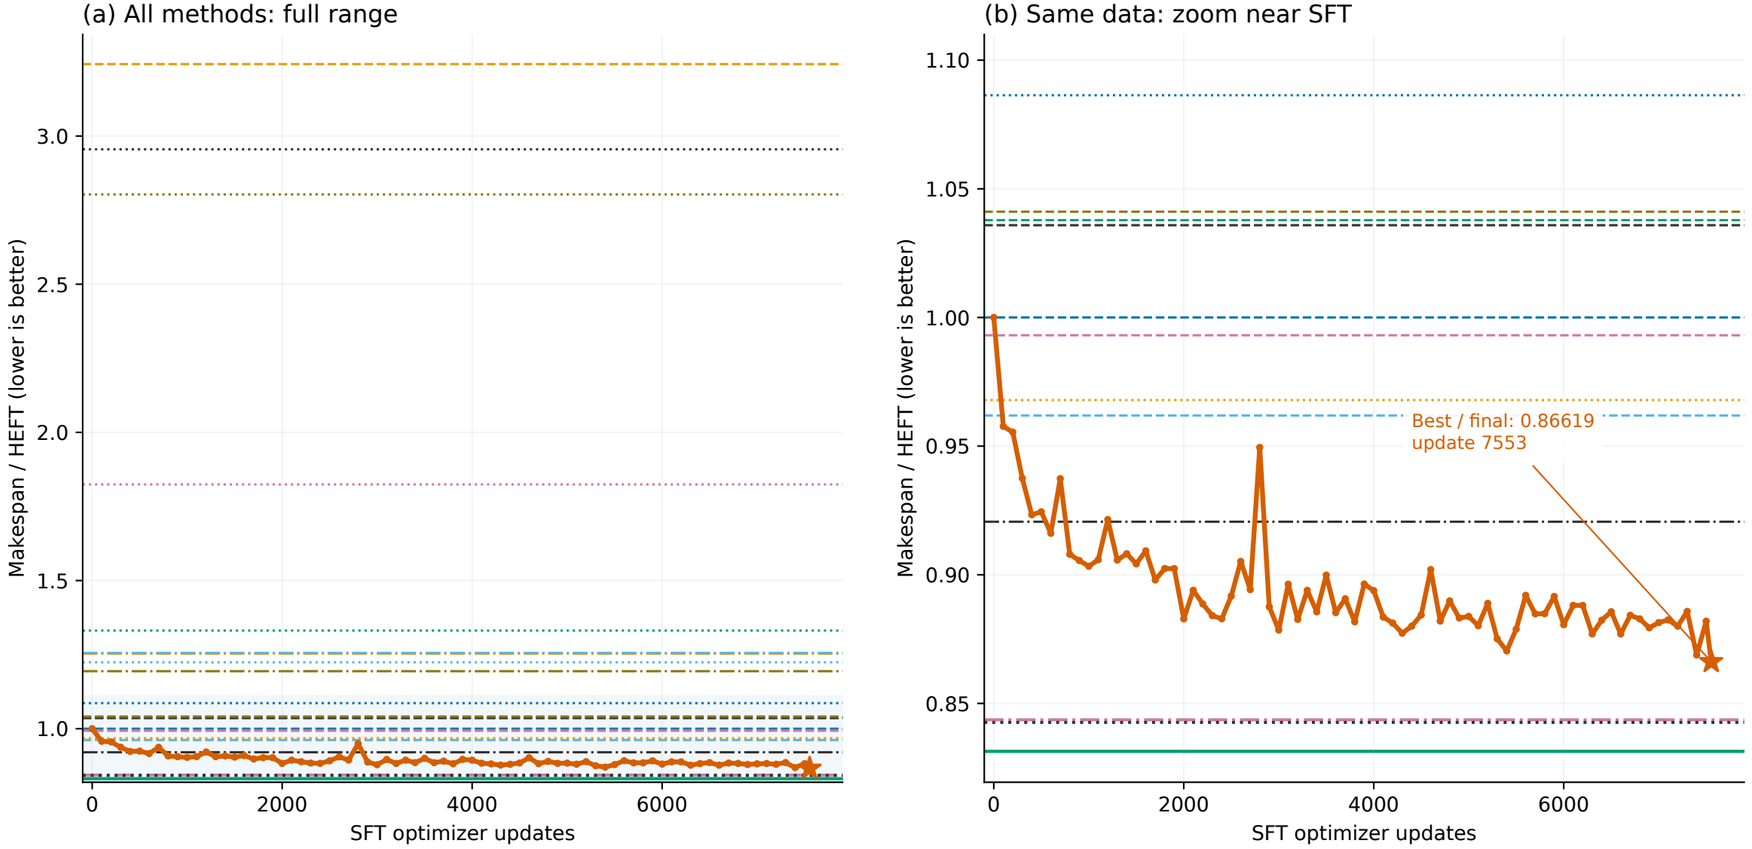
Original synthetic VAL862: SFT versus all baseline references

Primary: equal weight per base DAG | 862 configurations / 500 DAGs | 77 full-panel evaluations; no smoothing



SFT: original 17,261 TRAIN configurations; Teacher64+BHEFT-v2 labels; seed 28; 7 epochs / 7,553 updates.

Evaluations: update 0, every 100 updates, and final update 7,553. Each baseline is a fixed horizontal reference.

Rules use native ordering; Portfolio11 selects fixed-HEFT mapping replays. Learned controls are local adaptations (seed 11).

CAI: 7 training epochs, historical selected epoch; GiPH: 1 training epoch / 16 moves per graph, up to 2n evaluation moves.
